

1) label each of the above boxes with what they are

2) Draw the state of the diagram after 2 more commits have been made

3) Draw the state of the diagram after a branch has been created

4) Draw the state of the diagram after a commit has been made on our new branch

5) Draw the state of the diagram after a commit has been made on master

Beginning state of your repository (locally)

"c2" is the second commit made to the repo and so on and so forth

Write down the commands you would run and the resulting state of your repo fo the following situations.

situation	git commands	resulting repo state
merge master into my-feature		
make another commit on my-feature		
push your local changes to my-feature to remote (assuming that an un-updated my-feature exists on remote)		
pull remote master into local master		
merge my-feature-branch into master
